adobe acrobat dc professional crack serial number 15 amtlib.dll crack 18 apple acrobat crack miau 3.07.2009 - Mozaika.org adobe acrobat dc standalone 17 pro crack 16 apple acrobat cc 2017 pro 19 apple acrobat dc pro trial 17Q: How to substitute a new value in a table? Let's say we have a table containing a set of data (X, Y, Z,...) and we want to substitute a new set of data by inserting it in a chosen position (We can't just copy over the values) So here is a minimal example :
Table[Evaluate[{{X[#], Y[#], Z[#]}}] &, {i, 1, 3}] { {{X[1], Y[1], Z[1]}, {X[2], Y[2], Z[2]}, {X[3], Y[3], Z[3]}} } How to force Mathematica to insert the new set of values just behind the first entry? I know one way to do this but I would like to see any other way to do this than my solution. PS : I'm aware this can be done with Evaluate, but I would

like to look into more general way to solve this problem (for example replace all occurrences in a matrix) A: Use TableElement as a replacement for the whole list:

Table[Evaluate[TableElement[{{X[#], Y[#], Z[#]}}] &, {i, 1, 3}] or directly specify the index to replace:

Table[Evaluate[Table[{{X[#], Y[#], Z[#]}}] &, {i, 1, 3}] {{X[1], Y[1], Z[1]}, {X[2], Y[2], Z[2]}, {X[3], Y[3], Z[3]}} or by replacing the coordinates inside a list:

Table[Evaluate[Table[{{X[#], Y[#], Z[#]}}], {i, 1, 3}] &, {i, 1, 3}] {{{X[1], Y[1], Z[1]}}, {{X[2], Y 6d1f23a050
