new features for 2019 bring the power of adobergb colour space support and an improved suite of colour tools plus new photo modes and exposure controls along with ai-based corrections for lens distortions, vignette and other effects. new content creation tools, such as templates, brushes and more, are grouped under new umbrella categories, while today they were all spread across many different apps. adobe introduced a new multi-app ui to get users around the clutter, and shared and sync creative cloud libraries are also now available. in addition to all of the features of the bose portablesmart speaker, there are several unique capabilities of the smart speaker that provide more personalized, real-time sound for the person who speaks. using its two built-in microphones, the portable smart speaker listens for you to start a request, followed by a distinct 1-second feedback you can follow to confirm the request, and then it takes the next step. bose's smart assistant is a virtual assistant platform and has the capability of understanding and responding to voice-activation requests, so you can interact naturally with your device at a distance, using your voice and without touching your device. if you start music on the bose portablesmart speaker through wi-fi (using a voice assistant or the bose music app, for example) and then you carry the product away from your wi-fi network, at some point the speaker will lose its wi-fi signal and the music will stop. at that point, if you want to keep playing, just press the bluetooth button on the speaker to connect to your mobile device and play content from there. if you start playback over bluetooth away from wi-fi and then bring the speaker home to a wi-fi network, it will reconnect to wi-fi in the background without interrupting your music. 5ec8ef588b
