"Adobe Creative Cloud," as it's called to distinguish it from Adobe's earlier subscription-based UI (User Interface), is now the standard cloud service for all three Adobe products on Windows. A year ago, I wondered whether that could happen as Adobe subsumed its products into one cloud-based service. Well, it has and it's good. Adobe added the Creative Cloud service to more platforms than ever and, more importantly, it's fragmented in less ways. With Creative Cloud, Mac, iOS and Android owners get access to the Adobe cloud that they can share with Windows PC and Mac users. It's a nice addition. Adobe Creative Cloud is a subscription-based service that requires membership to use the products. You can buy the right for 12 months, six months or three months. This subscription service is only available on Windows at the moment. The concept is simple and it works fine. In fact, I've noticed no problems with it. At least on Windows, you can click on the Artboards, the frame, the PSD, the Export path and the Lightroom catalog, all to edit, create, discard, preview and publish files to Adobe's servers. They all work true. You won't lose image files or your photo data with Creative Cloud. However, you can try Elements 21. I don't recommend upgrading just because Creative Cloud is now available on Windows, because there is no change in the product. As with LR, there remain some workflow-related issues with the tag browser and Artboards. You can't download any files at the moment to your Windows PC, as you can with a Mac.
